

# hyTub Attachment sealing tape

**WITHOUT FLEECE** for the sealing with **hyFlat** - the self-adhesive sealing membrane!

**WITH FLEECE** for compatibility with liquid foil or sealing slurry.

The latest development of the well-known tub sealing tape. The standard-compliant solution for a sustainable partial refurbishment. The bath/shower tray is retained. The wall will be re-tiled or clad!

The tub attachment sealing strip always has a width of 80 mm. The length is variable.

## Application

The new bath attachment sealing tape is applied to the existing tub and wall surface. The shower tray can remain. The bath attachment sealing tape, in combination with our self-adhesive corner tapes, wall sleeves (for the pipe openings) and the self-adhesive sealing membrane, ensures a standard-compliant seal. Apply cementitious/liquid adhesive systems directly to the fleece-sided sealing membrane to permanently attach wall coverings (tiles, Alu Dibond panels). Finished!

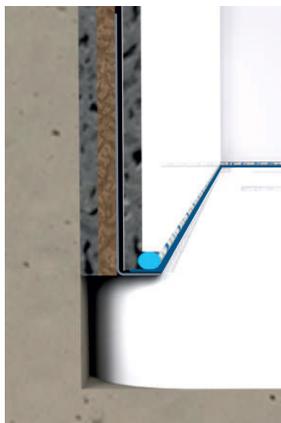

The tub top sealing tape is applied to the tub and existing surface.

After installing the sleeves and the corner adhesive tape the sealing membrane.

The tub attachment sealing tape on the tray is shortened to the installation height.

Application of the joint filler to protect the seal in case of later replacement.

Sealing with silicone and fitting the taps. The shower area is complete!
